

ACG Consulting: Oracle Express Solutions

Why Choose ACG?

Since 1987, ACG has been a leader in the design and implementation of both packaged and custom Oracle Express solutions. Combining a thorough understanding of the business enterprise with a comprehensive knowledge of the Express technology, ACG has time and again provided our clients with the perfect fusion of business savvy and technological expertise.

The ACG Advantage

ACG's consulting services staff is comprised of some of the most experienced Express consultants in the industry. Over the years, ACG has performed hundreds of Express implementations with a diverse group of Global 1000 companies, covering the spectrum of the CPG, Pharmaceutical, Financial, Retail, and Manufacturing industries. Clients can rest easy knowing that this vast collective wealth of experience and knowledge will be brought to the table to insure each client's experience with ACG is successful.

What ACG can do for you

ACG's core strengths in implementing Oracle Express solutions fall within two distinct categories: standard and custom solutions. Standard solutions refer to the standard suite of Oracle Express applications, while custom solutions cover everything else that falls outside that arena. Whether it is implementing Oracle Sales Analyzer (OSA) or Financial Analyzer (OFA), building a custom Web reporting solution from the ground up, or optimizing database build times or on-line application performance, ACG's extensive experience insures that the implemented solution is the best it can be.

The following is just a small sampling of the skills and solutions that ACG consulting services can provide in the Express consulting field:

- **Database design:** Whether for an OSA, OFA, or custom Express solution, ACG has the first-hand experience in implementing "best practices" for your database design. By being fully conversant with the potential pitfalls and issues, ACG can help you avoid bad design decisions that could ultimately lead to unacceptable system performance.
- **Update Automation:** ACG's "turn-key" approach to automating database builds and update procedures seeks to limit our clients to a minimum amount of involvement in the on-going maintenance of their systems.
- **Optimization:** ACG is intimately familiar with the Express environment at both the data and programming levels. This knowledge allows us to design and implement the most efficient system design possible, or to review existing systems and make recommendations for improvements.
- **Upgrades:** Over the years, ACG has performed numerous upgrades for clients in both the base Express technology and the packaged applications such as OFA and OSA.

Implementation Philosophy

ACG's core philosophy is that no project is successful unless the clients themselves are positioned to fully manage the completed solution once the ACG team has achieved the project objectives. We prefer not to build a system as a "black box" that is merely handed over to the client without a key. ACG's goal is to involve and educate the client team from start to finish, and perform the necessary knowledge transfer to insure the client is positioned to gain the maximum return on their investment in ACG.
